ABSTRACT

COVID TRACKER

Covid Tracker is a web application that tracks covid time to time and updates the information up to date. By the increase in the covid cases, one must take certain precautions for not being affected. This website works exactly the same. The user can get complete information like Statistics of Covid in the world, Covid Tests, Vaccinations, Hospitals offering Covid Treatment and much more…

This site provides login pages for both admin and the user. The admin has complete access over all the modules of the website. The admin can update and modify the info at any time. The other login page is for the user. The user can get the up to date info of the data provided in the site about covid. Before login, the user has to register in the register page. Only then, the user can access the information.
